Olszewski, T. S. & Szlachetko, D. L. 2000: New combinations in *Kryptostoma* and *Renzorchis* (Orchidaceae, Habenariinae). — *Ann. Bot. Fennici* 37: 297–300.

Seven new combinations in *Kryptostoma* (Summerh.) Geerinck emend. Szlach. and *Renzorchis* Szlach. & Olsz. (Orchidaceae, Habenariinae) are proposed.

Key words: Orchidaceae, Habenariinae, *Kryptostoma*, *Renzorchis*, nomenclature

Subtribe Habenariinae of the Orchidaceae has been poorly investigated taxonomically. Especially *Habenaria* Willd., the central genus of the subtribe, needs much further studies. During the last few years some new genera, such as *Ala* Szlach. (Szlachetko 1995), *Kryptostoma* (Summerh.) Geerinck emend. Szlach. (Geerinck 1982, Szlachetko 1995), *Renzorchis* Szlach. & Olsz. (Szlachetko & Olszewski 1998a), *Podandriella* Szlach. in Szlach. & Olsz., and *Veyretella* Szlach. & Olsz. (Szlachetko & Olszewski 1998b) have been described within Habenariinae.

The new combinations proposed in this work extend the known geographic ranges of the genera *Renzorchis* and *Kryptostoma*. Previously, *Renzorchis* was recorded only from Gabon (Szlachet-

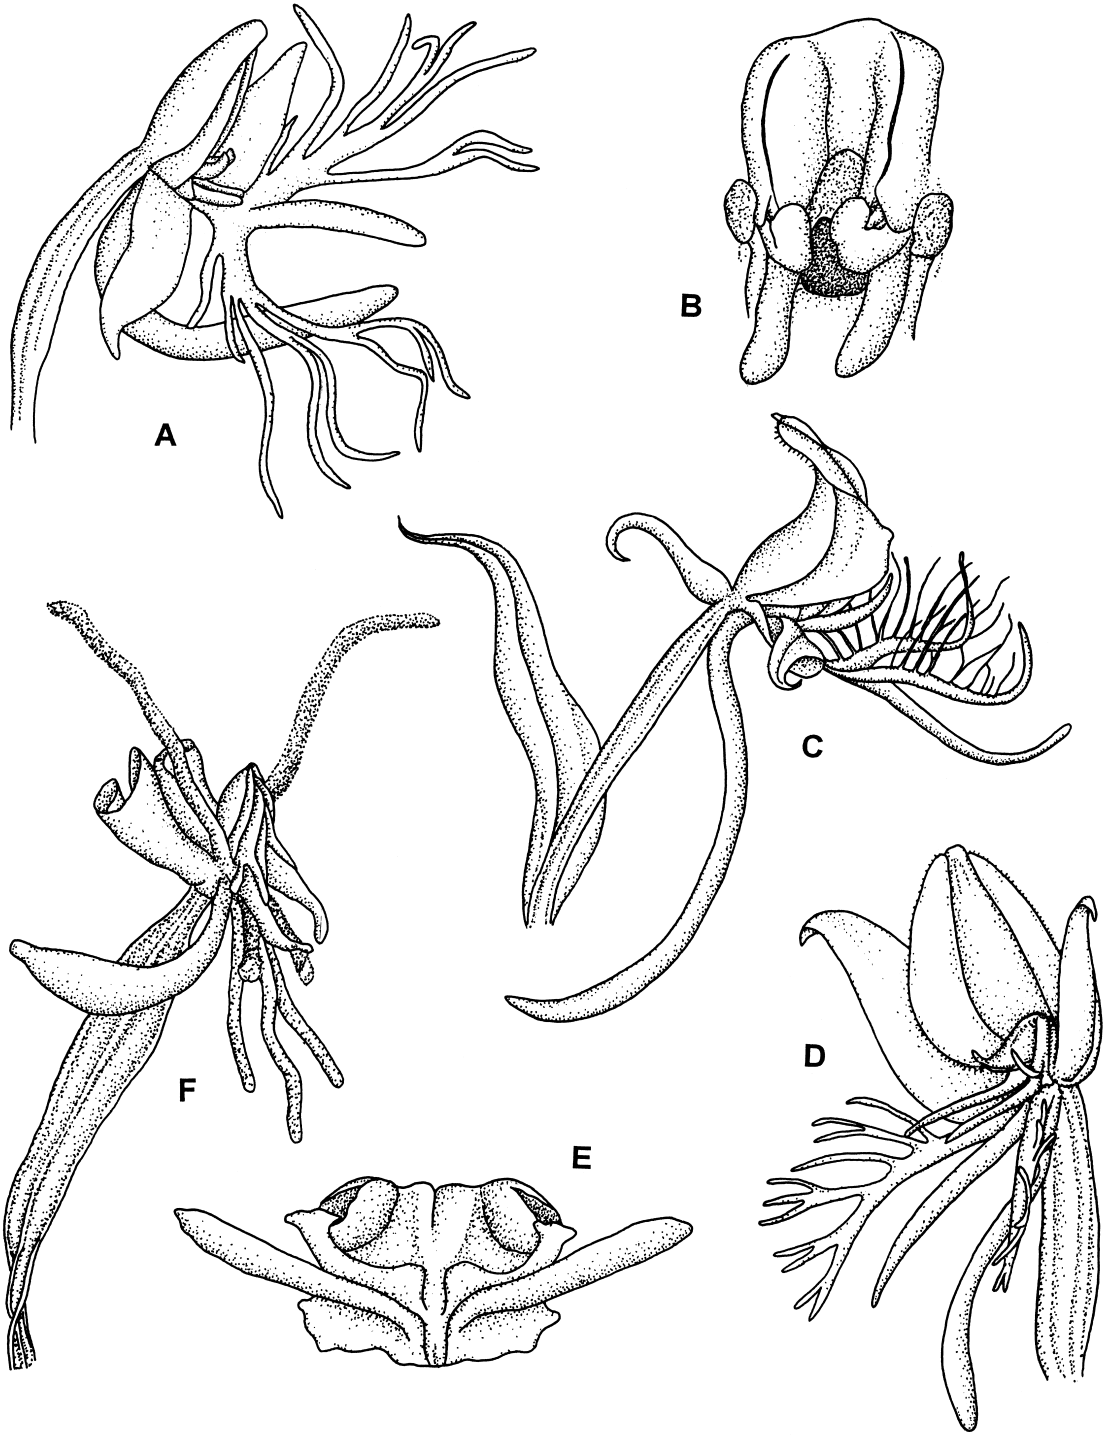

ko & Olszewski 1998a), and Asiatic species of *Kryptostoma* were known from Java and China (Szlachetko & Olszewski 1998b).
